

MARCH 2007 MSPE DETROIT METRO CHAPTER PROGRAM

Presentation and Tour of Visteon Village

SmithGroup was commissioned to create the corporate headquarters complex in the form of a village for Visteon Corporation. The 265 acre village, acting as a community, is a unique concept in the creation of headquarters facilities. The community includes administrative offices, development/delivery areas, technology/laboratory areas, work area support space, amenities and building support. Among its energy conserving features, the Village engages the 55' deep lake for chiller condensers, winter free cooling, fire protection reserve, and site irrigation; and the office areas include an innovative linear underfloor air distribution system for perimeter loads. Visteon is pursuing a Silver LEED certification for the project's multi-discipline sustainable design features, and ASHRAE recognized the design in its national 2007 Technology Awards.

Date: Thursday, March 15, 2007
